

The International Network on Traditional Water Use is a global network promoting historical documentation and rehabilitation perspectives of Traditional Water Use objects.

Objectives:

The network provides a platform for interested institutions and individuals in traditional Water Use worldwide. The focus is particularly on:

- **Traditional irrigation**
- **Traditional use of springs and spring galleries and historical fountains**
- **Traditional use of water power, timber rafting**

After a phase of decline in traditional irrigation schemes in the past Century many initiatives for restoration and rehabilitation have started after 1980. Often springs and spring galleries are closely connected to irrigation. Recently many initiatives are ongoing. The platform enables the exchange of experience and knowledge and promotes synergies between the single actors.

Further Activities of the Centre:

- Information and exchange of knowledge on the issues
- Organisation of conferences and regional workshops
- Organisation of excursions in collaboration with regional groups
- Edition of reports and monographs on the thematic and regional issues

How to cooperate the Network?

Please contact: www.intwater.uni-freiburg.de and give your coordinates to the registration window.
